

Press Release derivo GmbH, Ulm, Germany, February 2012

blitzbox Finds Documents by Their Story

As finalist of the international CODE_n innovation contest derivo GmbH is showing blitzbox, its newest development at CeBIT 2012 trade fair

“We often recall the story of a document”, says Dr. Thorsten Liebig, CEO of derivo GmbH. “Where we have given a presentation or from whom we have received a report intuitively is kept in mind — in contrast to directories of file names” he adds. The search solution blitzbox finds documents by their story and completely independent of any content management or filing system. derivo will present this innovation at CeBIT 2012 for the first time. blitzbox automatically infers search-relevant connections amongst documents, places, mails and persons. The blitzbox interface offers these stories as filter criteria for search and also integrates traditional keyword search.

blitzbox has been selected from over 400 ideas for presentation at CeBIT as CODE_n contest finalist. CODE_n is an international innovation contest driven by well-known partners such as GFT, BITKOM, Fujitsu, Ernst & Young and Deutsche Messe AG. Private as well as business clients are invited to hall 16 to get an idea “how fast I can find that text document, that I received from Peter and edited in Berlin, because”, explains Liebig “every document has a story”.

About derivo

The derivo GmbH is a young, innovative IT company. derivo faces the challenges that comes with more complex and extensive data pools with a semantic management of knowledge and custom-build semantic solutions for end-user as well as organizations.
